partly integrated in July 2005 into SFB 701

In CRC 701 applied and theoretical mathematics have joined forces in order to realize the considerable potential of infra disciplinary research. Besides representation theoretic methods and p-adic structures in arithmetic algebraic geometry there was

- ▶ Influence of new concepts of mathematical physics :
 - ▶ Seiberg-Witten invariants in topology
 - ▶ universal spectral distributions in quantum physics and number theory
 - ▶ quantum field theory and theory of moduli spaces in algebraic topology
 - ▶ concepts of quantum information and quantum groups
- ▶ Applications in theoretical physics, fluid dynamics, crystallography, material sciences and mobile communications of results in
 - ▶ topology
 - ▶ number theory
 - ▶ stochastic analysis
 - ▶ free probability

respectively.

- ▶ Hiring strategy supported by faculty and university: strengthen the areas between the CRCs existing main research fields
- ▶ create new perspectives for collaboration and future projects.
- ▶ Vacancies due to retirement or accepted outside offers:
immediate or overlapping new appointments, e.g. H. Abels,
W.-J. Beyn, C.M. Ringel and T. Zink
